Econometrics question and answer Notes, Summaries and ...

Econometrics (60 points) Question 7: Short Answers (30 points) Answer parts 1-6 with a brief explanation. 1. Suppose the model of interest is $Y_i = \beta_0 + \beta_1 X_{1i} + \beta_2 X_{2i} + u_i$, where $E(u_i|X) = 0$ and $E(u_i^2|X) = \sigma^2$ and X_1 and X_2 are uncorrelated in your sample. Will the bivariate regression of Y on X_1 have the same coefficient estimate and standard ...

ECON 300 Econometrics Exam I { Part II Solutions

Econometrics - Exam 6 individual dummies. To test the pooled restriction, we can use the F-test for the restriction that all these dummies are equal to each other. The F-test statistics is: $F(n-1, nT-n-k) = (R^2_{fixed} - R^2_{pooled}) / ((n-1)(1 - R^2_{fixed})) / ((nT-n-k) - 1) = (0.986294 - 0.956152) / (162-1)$

$$(1 - 0.986294)/(972 - 162 - 2) = 0.030142/161$$

Econometrics - Exam

Econometrics-Exam 2 Solution: 1. $\text{Var}[\hat{\beta}_j] = E[(\hat{\beta}_j - \beta_j)^2] = E[\sum_{i=1}^n u_i^2] = \sum_{i=1}^n E[u_i^2] = \sum_{i=1}^n \sigma^2 = n \sigma^2$ as all covariances are zero $= \sum_{i=1}^n \sigma^2 = n \sigma^2$ The OLS estimator remains unbiased but it is inefficient and the standard errors are invalid. 2. Multiply observation j by $\sqrt{X_j}$. The regression becomes $\sqrt{X_j} Y_j = \sqrt{X_j} \beta_1 + \sqrt{X_j} \beta_2 S_j + \sqrt{X_j} \beta_3 C_j +$
